

The only way to do great work is to love what you do.

Stay hungry, stay foolish.

The best way to predict the future is to create it.

Text 2 —Climate Policy Challenges	4

Text 1 —The Value of Higher Education

第一段

① How does the author view the value of higher education in the modern economy?

② The financial return on a college degree has become a widely debated topic, with some arguing that the rising cost of tuition has diminished the economic benefits.

③ However, recent research suggests that the wage premium for college graduates remains substantial, particularly in fields requiring specialized technical skills.

④ Moreover, the non-monetary benefits of education—including better health outcomes, greater civic engagement, and higher life satisfaction—are often overlooked in cost-benefit analyses.

参考译文：高等教育的非货币收益——包括更好的健康状况、更高的公民参与度以及更高的生活满意度——在成本效益分析中常常被忽视。

第二段

① What is the main concern raised about the cost of college?

② The primary concern is that tuition fees have grown at a rate far exceeding inflation,

placing an increasingly heavy burden on middle-class families who do not qualify for substantial financial aid.

③ This has led to a situation where students from disadvantaged backgrounds are either priced out of higher education entirely or forced to take on significant debt that constrains their career choices.

参考译文：这导致了一种情况：来自弱势背景的学生要么完全被高等教育的高昂费用拒之门外，要么被迫承担巨额债务，从而限制了他们的职业选择。

④ Policymakers have proposed various solutions, ranging from income-driven repayment plans to tuition-free community college programs, but consensus remains elusive.

📖 词汇手记

Text 2 —Climate Policy Challenges

第三段

① The implementation of effective climate policies faces numerous obstacles at both the national and international levels.

② While the scientific consensus on anthropogenic climate change is overwhelming, translating this consensus into actionable policy has proven remarkably difficult.

③ One key challenge is the temporal mismatch between the immediate costs of climate action and the long-term benefits, which creates political incentives for inaction.

④ Furthermore, the unequal distribution of climate impacts across different regions and socioeconomic groups complicates efforts to build broad-based political coalitions.

参考译文：此外，气候变化对不同地区和社会经济群体的影响分布不均，这使得建立广泛政治联盟的努力变得更加复杂。
